THIS DOCUMENT WAS PREPARED BY WESTON SOLUTIONS, INC., EXPRESSLY FOR EPA. IT SHALL NOT BE RELEASED OR DISCLOSED IN WHOLE OR IN PART WITHOUT THE EXPRESS, WRITTEN PERMISSION OF EPA.

EXECUTIVE SUMMARY

The U.S. Environmental Protection Agency (EPA) Region 6 Prevention and Response Branch (PRB) tasked Weston Solutions, Inc., the EPA Region 6 Superfund Technical Assessment and Response Team (START-3) contractor, under Contract Number EP-W-06-042 and Technical Direction Document (TDD) No. TO-0001-08-07-02, to provide oversight of the removal of waste at the Arkansas Municipal Waste-to-Energy (AMWE) facility, located in Osceola, Mississippi County, Arkansas.

The U.S. Environmental Protection Agency (EPA) Region 6 submitted a General Notice of Potential Liability and Offer to Negotiate for Removal Action to Thermo Fisher Scientific, Inc. (Thermo), the potentially responsible party (PRP), for 200 Richard-Allan Scientific containers shipped to the AMWE facility by Safety-Kleen. The EPA and Thermo entered into an Administrative Order on Consent on 09 July 2008, for a Removal Action to address the removal of the 200 Richard-Allen Scientific waste containers. START-3 was tasked by the EPA to provide monitoring of the PRP removal actions at the Arkansas Municipal Waste-to-Energy site.

During the removal, Thermo was represented by Veolia Environmental Services, Technical Solutions, L.L.C. (Veolia). Veolia representatives visited the site, conducted a site walk, and prepared a work plan and a health and safety plan for EPA review. Veolia returned to the site on 08 July 2008 and completed the removal action on 10 July 2008, which consisted of the removal of 200 containers from the site and transport to a permitted disposal facility. The containers were transported to the Veolia facility in Port Arthur, Texas for final disposal by incineration.

On 10 July 2008, Veolia completed field activities and demobilized from the site. START-3 also demobilized from the site on 10 July 2008.

This final report was prepared by WESTON under Contract No. EP-W-06-042 for EPA Region 6. The EPA On-Scene Coordinator (OSC) was Althea Foster, and the START-3 Project Team Leader was Thomas A. Walzer.

THIS DOCUMENT WAS PREPARED BY WESTON SOLUTIONS, INC., EXPRESSLY FOR EPA. IT SHALL NOT BE RELEASED OR DISCLOSED IN WHOLE OR IN PART WITHOUT THE EXPRESS, WRITTEN PERMISSION OF EPA.

☐ The EPA Task Monitor did not provide final approval of this report prior to the completion date of the work assignment. Therefore, Weston Solutions, Inc. has submitted this report absent the Task Monitor's approval.

☒ The EPA Task Monitor has provided final approval of this report. Therefore, Weston Solutions, Inc. has submitted this report with the Task Monitor's approval.

1. INTRODUCTION

Weston Solutions, Inc. (WESTON®), the EPA Region 6 Superfund Technical Assessment and Response Team (START-3) contractor, was tasked by the Region 6 U.S. Environmental Protection Agency (EPA) Prevention and Response Branch (PRB), under Contract Number EP-W-06-042 and Technical Direction Document (TDD) No. TO-0001-08-07-02 (Appendix G), to provide technical support to the EPA during the potentially responsible party (PRP) removal action at the Arkansas Municipal Waste-to-Energy (AMWE) site located in Osceola, Mississippi County, Arkansas. A Site Location Map is provided as Figure 1-1 and a Site Area Map is provided as Figure 1-2. All figures are provided as separate portable document format (PDF) files. The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) Number assigned to the site is ARD982286957.

AMWE was a waste-to-energy facility that incinerated waste and used the heat derived from the incineration of the waste to generate energy, electricity, and steam; however, when the incinerator failed, AMWE continued to receive waste and to store the waste instead of incinerating the waste. Several companies used this site as a disposal site. These companies, identified as Potentially Responsible Parties (PRPs), received certificates of destruction for the waste they sent to this site. START-3 provided technical support to the EPA during the assessment phase to identify the PRPs. One of the identified PRPs, Thermo Fisher Scientific, Inc. (Thermo), entered into an Administrative Order on Consent (AOC) for a Removal Action with the EPA to address 200 containers that had been disposed of at the AMWE site.

THIS DOCUMENT WAS PREPARED BY WESTON SOLUTIONS, INC., EXPRESSLY FOR EPA. IT SHALL NOT BE RELEASED OR DISCLOSED IN WHOLE OR IN PART WITHOUT THE EXPRESS, WRITTEN PERMISSION OF EPA.

2. PURPOSE AND SCOPE

In 2001, Richard-Allan Scientific utilized Safety Kleen to dispose of 200 drums that were shipped to AMWE for destruction in the waste-to-energy facility. AMWE stored the drums instead of destroying the drums and their contents. In July 2004 and March 2006, EPA conducted container assessment, segregation, and staging. During the site assessment, EPA representatives identified 200 containers with Safety Kleen labels. Additional information determined that the drum contents had been generated by Richard-Allan Scientific and Safety Kleen had acted as a waste broker. Richard-Allan Scientific was purchased by Thermo; therefore, the containers became the responsibility of Thermo. The purpose of the PRP removal action was for Thermo (formerly Richard-Allan Scientific) to remove their 200 drums of waste from the AMWE facility and dispose of them at a permitted facility.

The scope of work defined in TDD TO-0001-08-07-02 tasked START-3 to document and monitor Thermo's removal activities. In addition, START-3 was tasked to review the work plan and health and safety plan developed by Thermo; maintain the site logbook (Appendix A); monitor removal actions; amend the START-3 health and safety plan (HASP) prepared for previous site work; coordinate with state and local agencies; coordinate with the EPA On-scene Coordinator (OSC); conduct air monitoring; and provide a written report to document the removal action. The EPA OSC was Althea Foster, and the START-3 Project Team Leader (PTL) was Thomas A. Walzer.

THIS DOCUMENT WAS PREPARED BY WESTON SOLUTIONS, INC., EXPRESSLY FOR EPA. IT SHALL NOT BE RELEASED OR DISCLOSED IN WHOLE OR IN PART WITHOUT THE EXPRESS, WRITTEN PERMISSION OF EPA.

3. SITE BACKGROUND

Information regarding site location, background information, and site description is presented in the following subsections.

3.1 SITE LOCATION

The AMWE facility consists of a waste-to-energy incinerator at 100 Incinerator Road, and a storage building, the J.T. Parsons Building, at 420 Parsons Drive, both in Osceola, Mississippi County, Arkansas. The facility of interest for this removal report is the J.T. Parsons Building. A Site Location Map is provided as Figure 1-1, and a Site Area Map is provided as Figure 1-2. The storage building is located at Latitude 35.69419° North and Longitude 89.97217° West.

3.2 BACKGROUND INFORMATION

In 2001, Thermo (formerly Richard-Allan Scientific) utilized Safety-Kleen to dispose of 200 drums of 10-percent formalin in small containers. Safety-Kleen shipped the 200 drums to AMWE for destruction. AMWE was a waste-to-energy incineration facility permitted by the Arkansas Department of Environmental Quality (ADEQ) to burn municipal and medical waste. On 19 February 2003, a formal complaint was filed with the ADEQ Hazardous Waste Division by Voy Gillentine, an Osceola City Councilman. The complainant alleged that the incinerator was being used to burn flammable materials. Also, the complainant claimed that several containers of flammable materials were being stored in an old sewing machine factory nearby. The incinerator is owned by the City of Osceola but was leased to AMWE and operated by Wally El-Beck. Wally El-Beck was associated with the site in 2001 and continued to be associated with the site until 2003 or early 2004. The site and building were investigated by ADEQ in March and April 2003. On 28 May 2004, the National Response Center (NRC) received an incident report, NRC No. 723338, reporting approximately 10,000 leaking 55-gallon drums inside a former hazardous waste facility.

Under EPA direction, the PRPs were identified and contacted; one removal performed by a PRP occurred in 2005, and, in early 2006, an additional removal assessment of the remaining

THIS DOCUMENT WAS PREPARED BY WESTON SOLUTIONS, INC., EXPRESSLY FOR EPA. IT SHALL NOT BE RELEASED OR DISCLOSED IN WHOLE OR IN PART WITHOUT THE EXPRESS, WRITTEN PERMISSION OF EPA.

containers at the site was conducted. This report documents the removal of 200 drums generated by Thermo.

3.3 SITE DESCRIPTION

The site currently consists of a storage building (J.T. Parsons Building) housing containers generated by various PRPs. At the end of the site assessment in early 2006 it was determined that 1,051 containers remained on-site, and Thermo was identified as being responsible for 200 of these containers.

The J.T. Parsons Building is located 1200 feet south of the intersection of State Route 61 and Ohlendorf Road. The site is located in an area that is mixed-use residential, manufacturing, and agricultural. To the west is an agricultural field, 350 feet to the northwest is a daycare center, and to the north are warehouses. To the east is a scrap metal yard, and to the south is a vacant manufacturing building. The closest residence is 750 feet to the east. The Mississippi River is 4,000 feet to the east.

3.4 HAZARD DESCRIPTION

The primary concern for the J.T. Parsons Building was the presence of explosive and reactive hazardous waste in containers and drums that posed a threat of release to the nearby community. EPA investigated whether products stored were hazardous or nonhazardous to expedite the removal and disposal of the building contents by the PRPs. The container labels for the material in the Thermo drums identified the contents as 10-percent formalin in small bottles. Formalin is hazardous due the content of formaldehyde, and Thermo currently ships this material as hazardous waste. The contents of these 200 containers were considered "Hazardous Waste" under the EPA Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) but, at the time of the shipment, were not under the Resource Conservation and Recovery Act (RCRA) 40 CFR 263 and 264. This was because the waste was being shipped to a waste-to-energy facility for energy recovery.

THIS DOCUMENT WAS PREPARED BY WESTON SOLUTIONS, INC., EXPRESSLY FOR EPA. IT SHALL NOT BE RELEASED OR DISCLOSED IN WHOLE OR IN PART WITHOUT THE EXPRESS, WRITTEN PERMISSION OF EPA.

4. SUMMARY OF START-3 ACTIVITIES

This section describes the actions taken at this site.

4.1 REMOVAL PREPARATION

On 01 July 2008, START-3 met with Thermo's representatives, Veolia, to conduct a site walk to evaluate site conditions and the conditions of the drums. Veolia was able to extract additional information regarding the drum contents based on markings on the drums. Thermo/Veolia provided a Statement of Work (Appendix C) and a worker Health and Safety Plan (HASP) (Appendix D). EPA OSC Althea Foster tasked START-3 to review the Thermo work plan and health and safety plan for accuracy. START-3 reviewed the Thermo preliminary work plan and provided EPA OSC Foster with comments.

4.2 SITE REMOVAL ACTIVITIES

On 08 July 2008, START-3 mobilized to the Arkansas Municipal Waste-to-Energy site to monitor site health and safety, conduct air monitoring for community health and safety, and to document Veolia's removal actions. On 08 July 2008, START-3 meet with Veolia so they could take delivery of over pack drums and store them in the J.T Parsons building. On 09 July 2008, after Thermo signed the Administrative Order on Consent (AOC), Veolia began overpacking drums and staging the drums for shipment.

On 10 July 2008, START-3 observed Veolia personnel overpacking the final drums, preparing the waste manifests, and loading the drums onto three trucks. Four hazardous waste manifests were prepared. Copies of the manifests for these shipments appear in the final report provided by Veolia (Appendix E). EPA OSC Foster released START-3 from the site on 10 July 2008 following departure of the trucks transporting the 200 drums.

4.3 AIR MONITORING

To monitor the safety of site personnel and the surrounding community, START-3 placed air monitors on the west and north walls of Building 2 in the J.T. Parsons Building outside the work area. These air monitors were used to monitor for dusts only using a Personal Data Ram (PDR)

THIS DOCUMENT WAS PREPARED BY WESTON SOLUTIONS, INC., EXPRESSLY FOR EPA. IT SHALL NOT BE RELEASED OR DISCLOSED IN WHOLE OR IN PART WITHOUT THE EXPRESS, WRITTEN PERMISSION OF EPA.

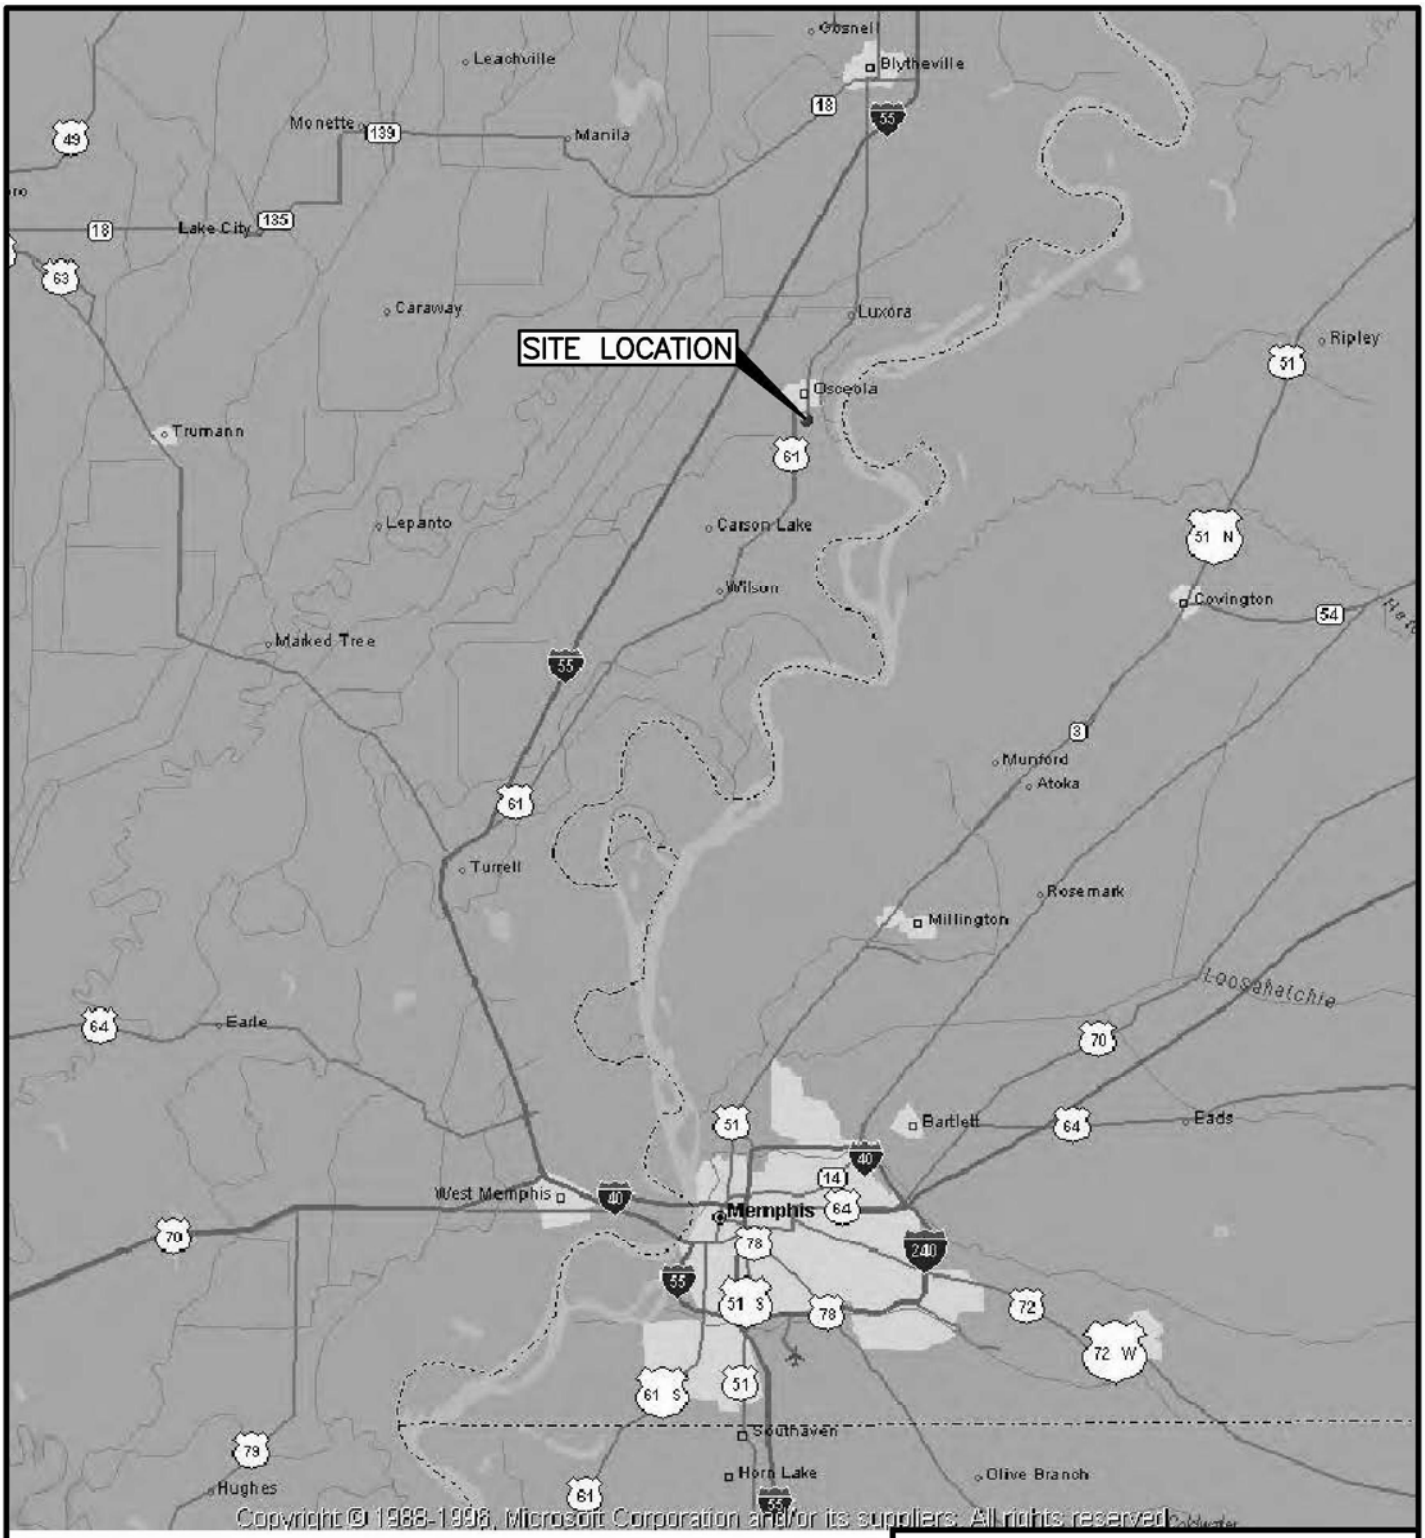

Aerosol Monitor. The immediate work area was monitored by START-3 using a PDR, a MultiRAE, and the Draeger CMS. The MultiRAE monitored for the presence of volatile organic compounds (VOCs), carbon monoxide (CO), lower explosive limit (LEL), oxygen (O2), and hydrogen sulfide (H_2S) in the work area. The MultiRAE monitor was calibrated every morning. The Draeger CMS used a chip system to monitor for formaldehyde. Frequent checks of the monitor instruments were made to ensure the instruments were functioning properly and to record the readings. Air monitoring was conducted throughout the work day and while site operations were being conducted within the building. The predominant wind direction was from the southwest, which was determined from on-site observations during working hours. The results of the air monitoring are presented in Table 4-1. A complete record of the air monitoring results is presented in Appendix F.
